CONSENT FOR TREATMENT

Patient's Name_____ Date_____

All Patients in the State of California are required to approve of all services rendered by their doctor before any services are performed. Refusal to comply with California Law releases your doctor of all liabilities and his/her right to refuse treatment.

I,_____, hereby request and give consent to my doctor to perform all necessary chiropractic examinations, adjustments, therapy and rehabilitation. I understand that my doctor will consult with me before any procedures are performed, at which time, I will give him /her permission to perform all necessary procedures to treat my condition. I understand I have an opportunity to discuss with the doctor and/or with the office staff the nature and purpose of my chiropractic care before any treatment is rendered.

Patient Signature_____ Date_____

IF THE PATIENT IS A MINOR, THE BOTTOM PORTION MUST BE SIGNED BY PARENT OR GAURDIAN.

CONSENT TO TREATMENT OF A MINOR

I hereby authorize Dr. Scott Neubauer and whomever he may designate as assistants to administer treatment as deemed necessary to my son/daughter.

The nature of spinal manipulation: The doctor may use his hands or a mechanical device in order to move your joints.You may feel a "click" or "pop", such as the noise when a knuckle is "cracked", and you may feel movement of the joint. Various ancillary procedures, such as Active Release Techniques® (ART®) soft-tissue therapy, hot or cold packs, rehabilitative exercises or electric muscle stimulation may also be used.

Possible Risks: As with any health care procedure, complications are possible following a spinal manipulation. Complications could include fractures of bone, muscular strain, ligamentous sprain, dislocations of joints, or injury to intervertebral discs, nerves or spinal cord. Cerebrovascular injury or stroke could occur upon severe injury to arteries of the neck. A minority of patients may notice stiffness or soreness after the first few days of treatment. The ancillary procedures could produce skin irritation, bruising, or minor complications.

Probability of risks occurring: The risks of serious complications due to chiropractic treatment have been described as "rare", about as often as complications are seen from the taking of a single aspirin tablet. The risk of cerebrovascular injury or stroke, has been estimated at one in one million to one in twenty million. The probability of a serious adverse reaction due to ancillary procedures is also considered "rare", except as described in the following section regarding ART®. Risks associated with Active Release Techniques (ART®) soft-tissue therapy include bruising, skin irritation, and increased sensitivity of the injured tissues. These risks are common and not usually serious. ART® is an aggressive form of treatment designed to break-up scar tissue and is often performed to the patient's tolerance of pain.

Risks of remaining untreated: ***Delay of treatment allows formation of adhesions, scar tissue and other degenerative changes***. These changes can further reduce skeletal mobility, and induce chronic pain cycles. It is quite probable that delay of treatment will complicate the condition and make future rehabilitation more difficult.

I have had the risks of my case explained to me. I have read the explanation above of chiropractic/physiotherapy treatment. I have had the opportunity to have any questions answered to my satisfaction. I have fully evaluated the risks and benefits of undergoing treatment. I have freely decided to undergo the recommended treatment, and herby give my full consent to treatment.
